

InnoEDGE for ACAP

embedded LPR on Axis cameras

Applications

- Parking control
- Entry management
- Border Control
- Air- and sea-ports
- Logistics sites
- any stop-and-go LPR application
- any low speed LPR application

InnoEdge, the embedded LPR engine

Turn your Axis camera into an intelligent LPR device, and perform License Plate Recognition directly from your standard Axis IP camera.

Using InnoEdge means no more centralized installation or processing, since your Axis IP camera delivers both a video stream and the license plates of the vehicles detected.

How does InnoEdge work?

Download the InnoEdge LPR engine directly from our website, install it directly inside any ACAP-compatible Axis camera and activate the license, that's all!

Your Axis camera now sends out the license plate of every vehicle detected.

What advantages does InnoEdge bring you?

InnoEdge allows you to deploy LPR at any entry/exit-point, using standard Axis IP cameras, offering you an extremely cost effective solution.

License plates sent out by InnoEdge can be integrated into most any VMS or Access Control system, allowing you to rapidly create a fully integrated system.

About InnoWare

InnoWare is an Italian developer of proven, modular, multi-purpose License Plate Recognition suites. InnoWare helps its private and public customers automatically manage and control their infrastructure, small or large, single- or multi-site, whether moving objects are cars, trucks or other, moving at low or high speeds, and whether systems need be deployed integrated or stand-alone, using new or existing cameras.
